Selected Bibliography

Starred items (*) are more introductory. Macfarlane (2005/2015) introduces the problem of logical constants. See also Sainsbury (2001) and Gómez-Torrente (2002). For inferentialist approaches to the problem, see Hacking (1979), Hodes (2004), and Peacocke's (1976) and (1987). For the problem of tonk, see Prior (1960). For replies, see Stevenson (1961), Belnap (1962), and Dummett (1991). Belnap appeals to conservativeness, Dummett to harmony. For Prawitz's views, the best place to start is his (2008).
